

Access Control Software

What is vIDix IDaxcess?

IDaxcess is a comprehensive Access Control system giving you the ability to control access to various areas of your facility. Eliminate the hassle of changing locks and keys when you experience staff changes or someone loses their key. Simply deactivate the badge and you are done. IDaxcess automatically records any attempts made using the deactivated badge and/or PIN.

The task-oriented user interface makes it easy to become proficient at adding users, assigning schedules, and granting access privileges. IDaxcess allows you to select a single door or group of doors when granting access – allowing an unlimited number of access profiles. This flexibility enables you to limit access to restricted areas (e.g. tool crib, computer room, accounting area, inventory, electrical closet, medical records, etc.) based on the individual time of day and day of week.

Why implement vIDix IDaxcess?

The need to secure the workplace has never been greater. Organizations are exposed to many different people everyday. Do you know who these people are entering your facility? Are they authorized to be there? Controlling access is your primary line of defense in establishing a solid security plan for your facility. IDaxcess software enforces access and helps you achieve a safer, more secure workplace.

Expand your security plan by integrating IDaxcess with other software components of the vIDix suite: IDimage, IDvisitor and IDtime.
