

Photo Identification Software

What is vIDix IDimage?

IDimage is a software package that allows you to produce low cost photo identification badges. These badges make it easy to identify every employee as they enter your facility and move throughout your building.

Producing a high quality photo identification badge is easy. Connect a digital camera to a PC, snap a picture, and IDimage software does the rest. The images automatically appear on the screen, so you can preview and approve photos BEFORE printing them. Then just enter the ID information into the system and in seconds your badge is complete.

Why Implement vIDix IDimage?

Your organization is exposed to many different faces every day. We don't think twice about current employees and invited guests, but what about unfamiliar faces? How do you differentiate between people who belong and those who do not? Aside from the locks on your doors, photo identification badges are your first line of defense in establishing a solid facility security plan.

With an IDimage photo identification system you always know who belongs and who doesn't. Employees wearing a photo ID badge are clearly identifiable. Badges can be used for electronic building access, to collect data, for time and attendance, or for transactions at a company store or cafeteria.

IDimage will help you achieve a safer, more secure workplace. To expand your security plan beyond photo identification, integrate your IDimage system with other components of the vIDix suite: IDaxness, IDvisitor and IDtime.
