

Visitor Management Software

What is vIDix IDvisitor?

IDvisitor is a sophisticated visitor management solution. With IDvisitor, visitors electronically scan their ID (business card or driver's license), and all relevant information about them is captured in a secure database file. Typically, the information collected can be a photograph, the name of the person being visited, the reason for the visit, and the time of the meeting. In just seconds, a guest is professionally checked in and a high quality visitor badge is automatically generated.

Over the last several years, hundreds of organizations (both large and small, public and private) have discovered the many benefits of replacing their outdated paper guest book with a cost effective visitor management system.

Why implement vIDix IDvisitor?

In most organizations today, visitors scribe their information in a paper guest book. These guest books are inexpensive and easy to use. However, the data collected is usually incomplete, difficult to read, and insufficient to aid in Sarbanes-Oxley (SOX) compliance. More importantly, confidential information regarding visitors at your facility is out in the open and readily available to anyone who wishes to flip through the guest book.

The IDvisitor software will help you achieve a safer, more secure workplace. To expand your security plan beyond visitor management, integrate IDvisitor with other components of the vIDix suite: IDaxxess, IDimage and IDtime.
